

## **JPS & Delme Virus maker**

### **JPS Virus Maker:**

JPS Virus Maker is an application that allows you to control various Windows functions. It is a virus that can be installed and removed easily. It doesn't delete data or provide personal data.

This is a small but very useful software. With the help of this you can create any type of trojans and program it to do whatever you want.

### **This can be programmed to do the following things:**

- Disable Ms Config
- Disable Task Manager
- Disable Yahoo! Messenger
- Disable Media Player
- Disable Internet Explorer
- Disable Time
- Disable Antivirus
- Disable Note Pad
- Disable Word Pad
- Disable Windows
- Disable DHCP Client Service
- Disable Taskbar
- Disable Start Button
- Disable Command Prompt
- Disable Control Panel
- Disable Desktop Icons
- Disable Screen Saver
- Hide Windows Clock
- Hide Desktop Icons
- Clear Windows XP Password
- Remove Folder Options
- Lock Mouse & Keyboards
- Mute Sound
- Always CD-ROM Open
- Turn Off Monitor (30 sec's)
- Destroy Taskbar
- Destroy Storage
- Destroy Clipboard
- Terminate Windows
- Hide Cursor
- Auto Startup
- Change XP Password
- Change Computer Name
- Disable Process
- Open Custom Website
- Run Custom Command
- And many more...

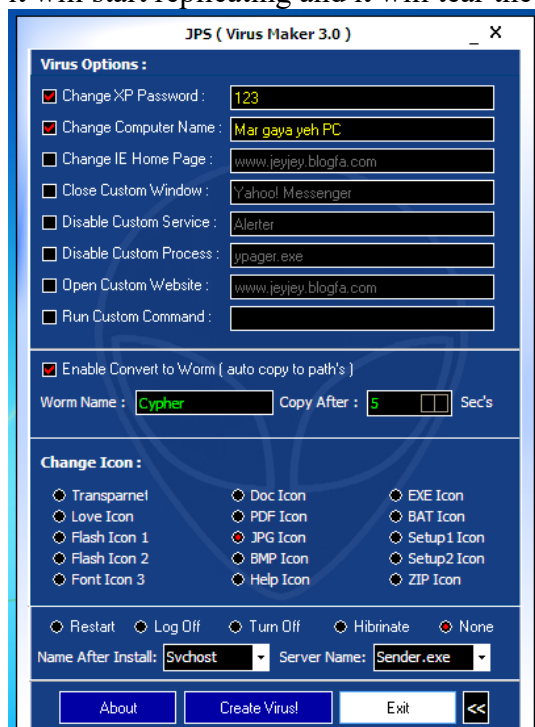

We are going to create a virus using JPS virus maker tool and target a system. Make sure you use a VM machine. This will definitely break down your computer and make it unusable.

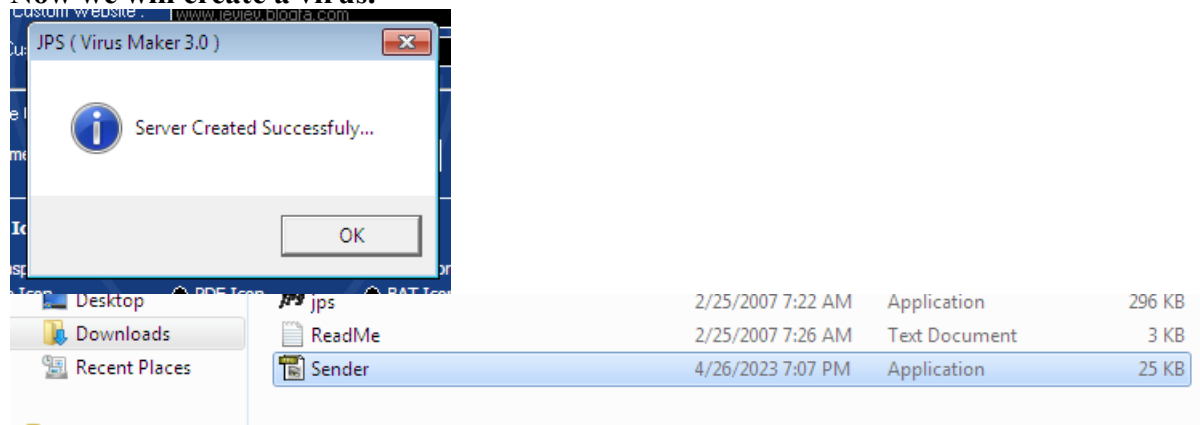

We will select all the things we want our virus to do.

**We can convert it into worm too. We won't do it because the worm will infect the computer who are connected to this computer. So, it will affect our main computer too.**

If we check create worm option, the worm will start copying after 5 seconds. After 5 seconds it will start replicating and it will tear the system and the system connected to that system.

Now we will create a virus.

Our virus is successfully created.

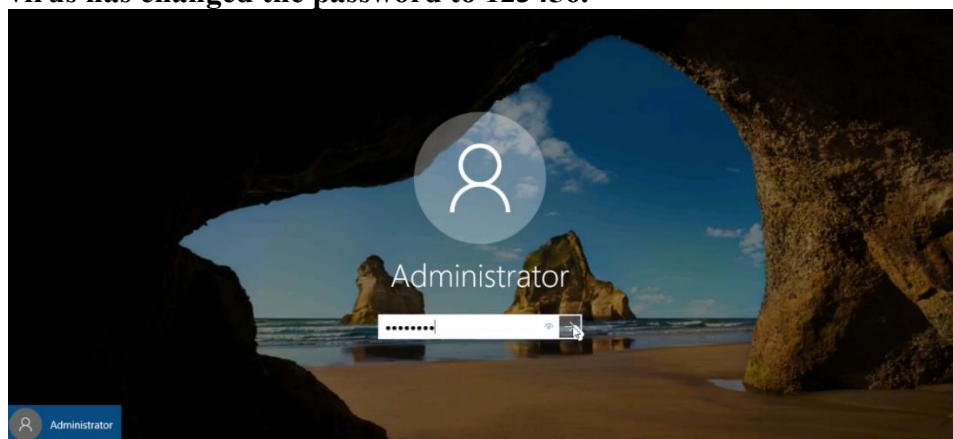

**Do not launch the application if you are not using VM machine. I'm using VM machine so it will execute it.**

After execution weird things will happen, the VM may crash, the whole computer may crash. There will be a black screen. What most people will do is restart.

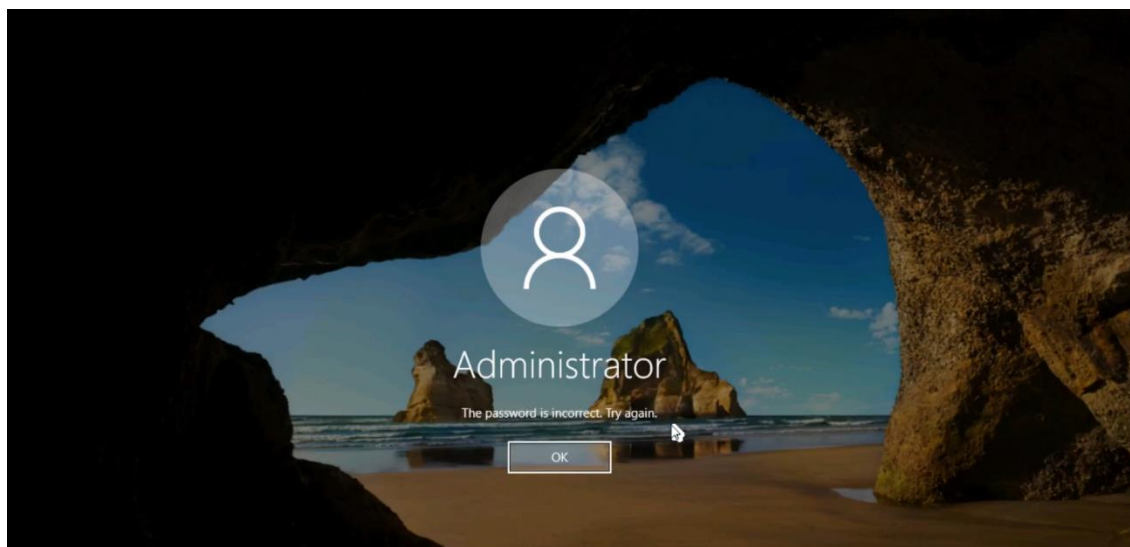

So, we will also restart.

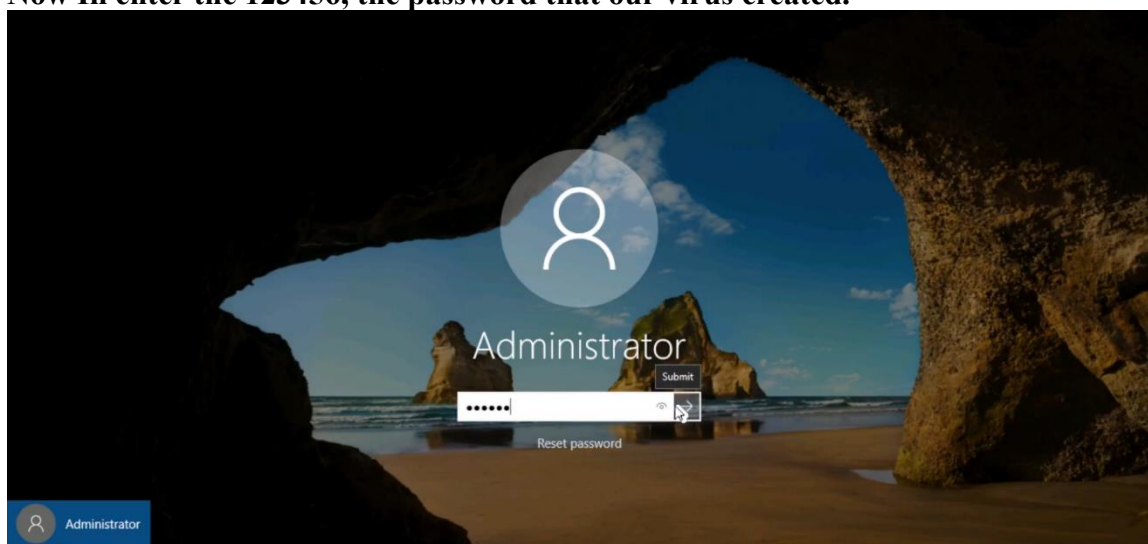

**When they restart and the password is asked people will enter the old password but the virus has changed the password to 123456.**

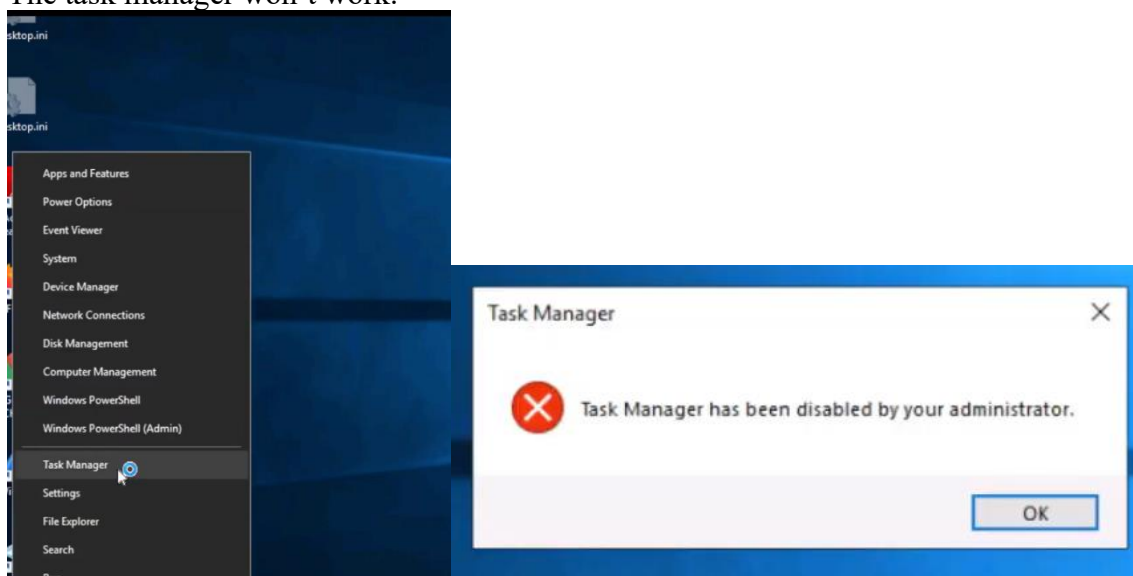

**If I use old password, it will show incorrect.**

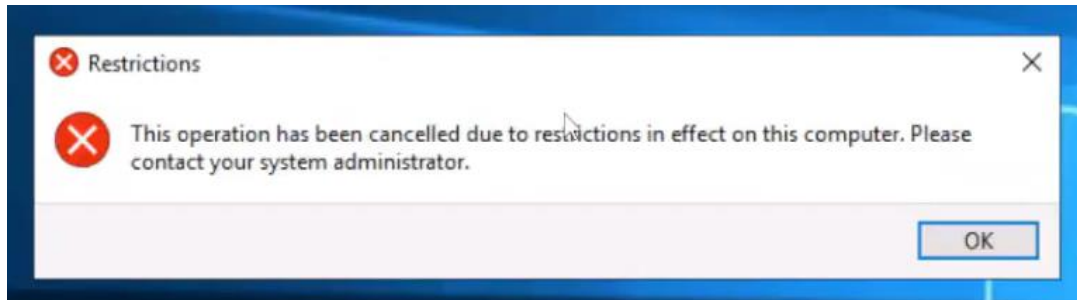

Now Ill enter the 123456, the password that our virus created.

Even if he somehow entered the password, more problem will be waiting for the victim. The task manager won't work.

The Control Panel won't work.

And all the things we checked while creating the virus won't work.

**So be careful.**

**Perform it in safe environment as we can't easily reverse the action.**

### DELmE Virus Maker:

DELmE's Batch Virus Generator is an amazing virus creation program with lots of options to infect the victim's PC such as formatting C: drive, deleting all files in Hard Disk Drive, disabling admin Privileges, cleaning registry, changing home page, killing tasks, disabling/removing antivirus and firewall and lots more.

The software has Virus. Because virus can be created with virus infected file.

#### Steps:

- Execute the .exe and open DELmE's Batch Virus Generator.
- Assign whatever functions do you want to perform at your Victim's PC.
- Give it a Name and save it in your Desired Location as .bat.
- Finally, your virus is ready to Infect

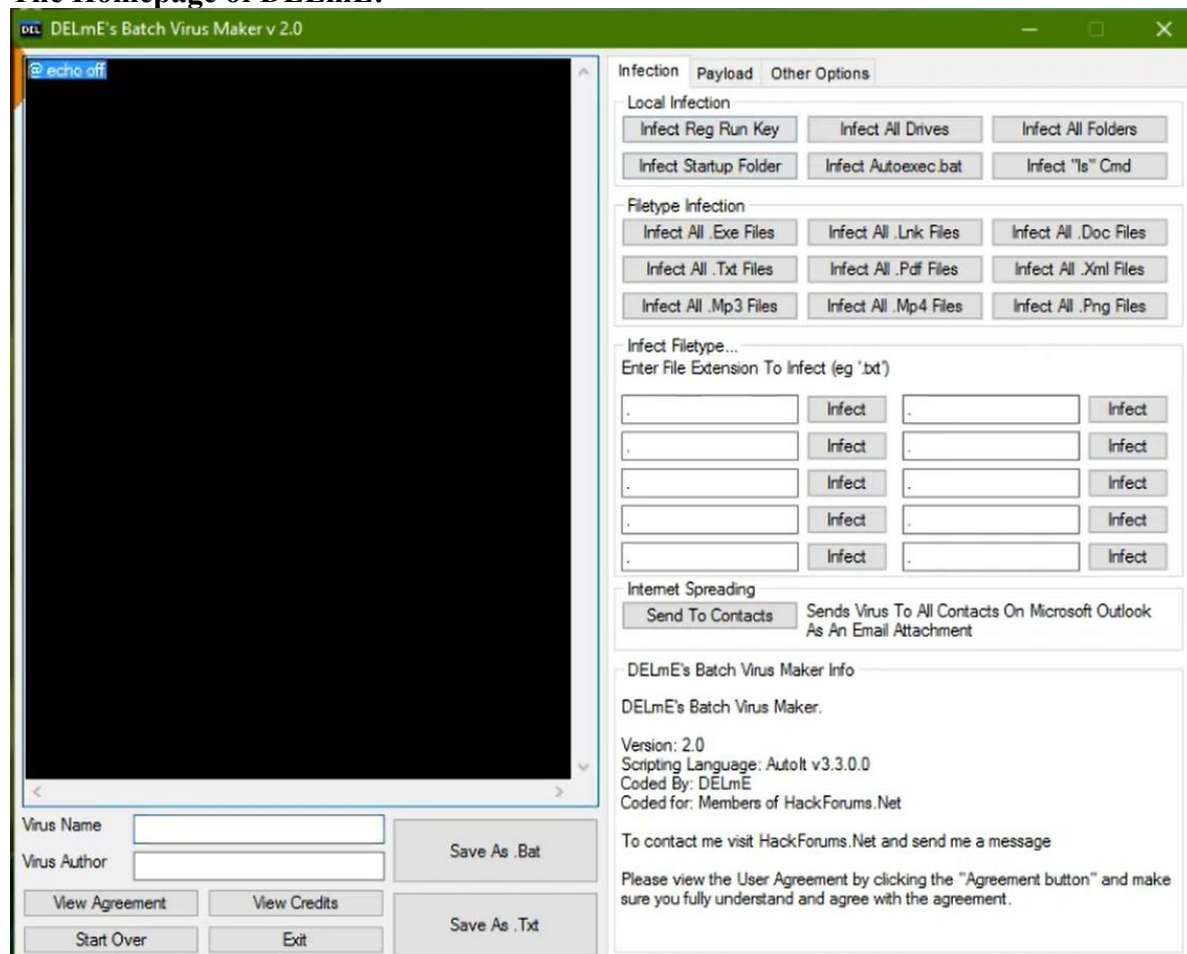

This is a virus creating tool so it might be possible that your anti-virus may detect it as a virus, turn off your anti-virus before using it.

**Don't Infect Your own system by double clicking on Created Virus .bat File**

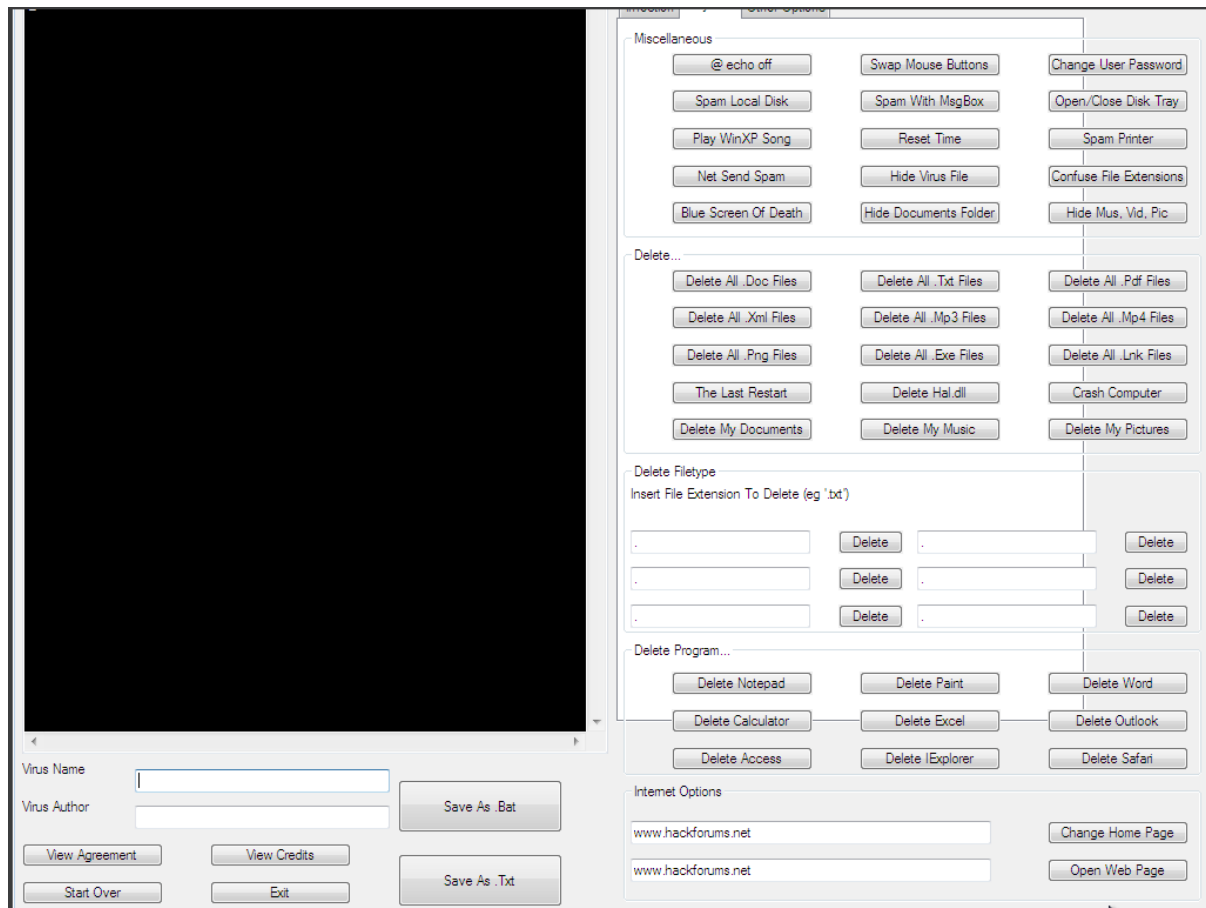

**But you can stop the running virus file by:**

- Open Task Manager (Ctrl + Shift + Esc).
- Look for the file that you want to stop (example virus.bat).
- Right click on it and select End Task.

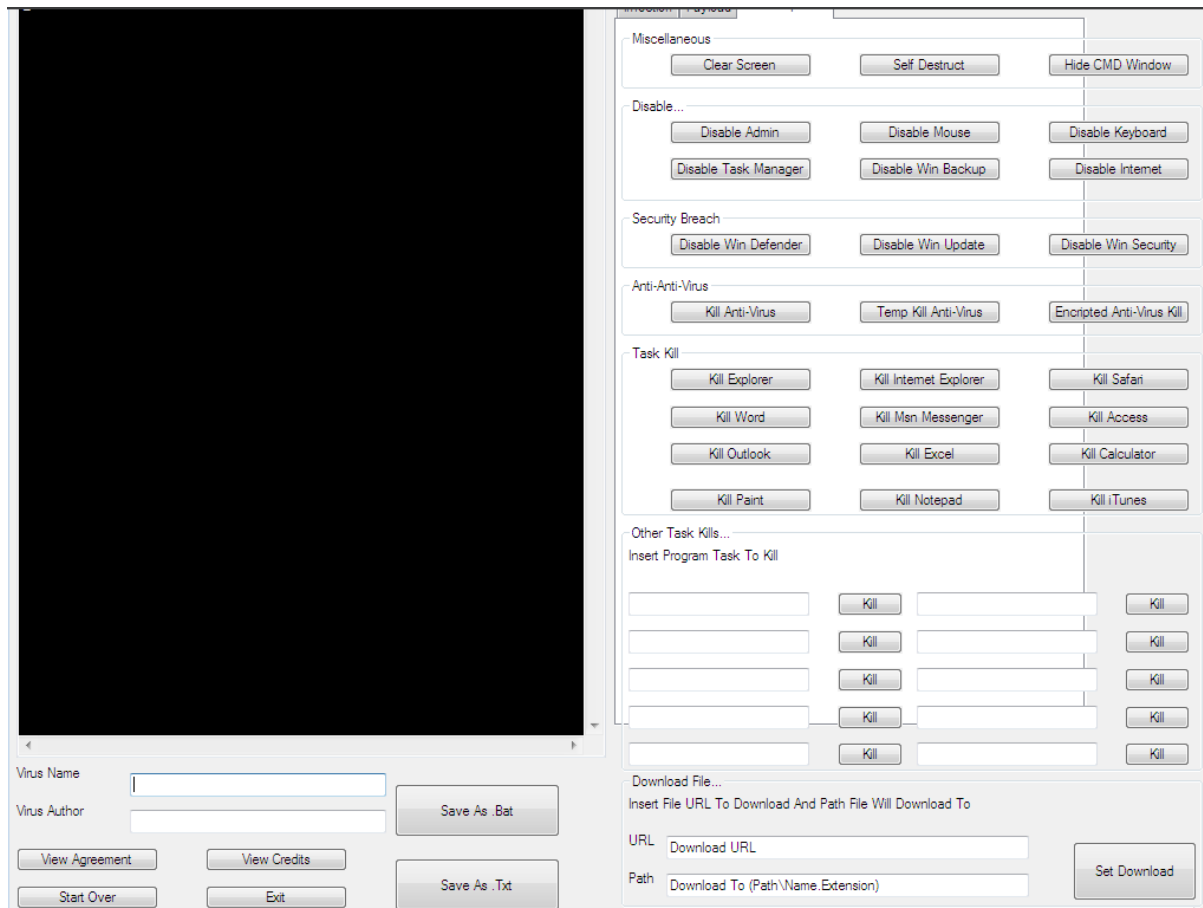

### The Homepage of DELmE:

1. We can infect all the devices.
2. Infect all folder.
3. Infect startup folders.
4. Infect a specific type of files using infection.
5. We can even send the virus the virus to other to infect their system.
6. And much more...

1. Using swap mouse button, the left click will turn into right click and vice versa.
2. Change user password will change the password.
3. We can spam local disk, magbox.
4. Delete all files, the files of specific type.
5. We can crash the whole computer.
6. And much more...

1. We can clear the screen.
2. Self-destruct the whole PC.
3. Disable Admin access.
4. Kill Anti-virus.
5. Kill explorers.
6. Kill everything.
7. And much more...

We can do a lot of things using DELmE virus maker.

**We will perform some of the commands.**

**Do not try on your machine, it will do permanent damage to it.**

**I have enabled the following virus:**

1. Change user password to DELmE
2. Hide Virus file
3. Crash computer
4. Permanent kill anti-virus
5. Delete all txt file
6. Delete all pdf file
7. Delete all mp4
8. Delete my music
9. Delete my pictures
10. Any much more...

```

After setting my virus, I have set the virus name as ‘test’. Author as me. And save as .bat file. Our .bat file is generated.

Don't run the .bat file. Else it will infect our PC and will crash it.
